

# My reflective exercise

---

During this year of University in onomine classes, students like me as to adapt with different working methods to assimilate and learn their courses.

So for me, I learn that my learning skills has improve drastically during this year because I change drastically how I do my work and how I learn. I've made schedules that I needed to respect like one hour of russian after that make the TD etc... And I made that everyday morning so I know what I need to do for this day. It was a rather effective method to learn and to get my job done and if I hadn't done it i would not be able to pursue those differents classes and learn what the teacher want you to learn. Everything that I learn during this year through all the different classes was very interesting ans useful for my future job even tho I wasn't very attentive to them because online school is very hard for a shy guy like me, but that was a great experience to live and if I could change something for the next year it should be my attentiveness and to work harder.
